The Group

A one-window provider in Energy, Industrial Solutions & Infrastructure

Engr. Mohammad Waqas Hussain

CHIEF EXECUTIVE OFFICER

MESSAGE FROM THE CEO

On the threshold of a new era...

We take this opportunity to introduce ourselves as one of the established construction and engineering companies in the Islamic Republic of Pakistan.

Future Engineering (Pvt) Ltd — FEPL — is a leading engineering company specialising in electromechanical contracting, engineering, sourcing, project management, operations & maintenance, and services business in support of the installed base.

Engr. Mohammad Waqas Hussain

CEO, Future Group of Companies

ABOUT US

Who We Are

The Future Group of Companies is a diversified group known for innovation and excellence across engineering, construction, logistics and technology.

Operating as a one-window solution provider in Energy, Industrial Solutions and Infrastructure, the group brings engineering, fabrication, construction, design, logistics and legal capability together — so clients deal with a single accountable partner from design through to long-term support.

Since 2010 the group has worked alongside leading Chinese EPC contractors on combined-cycle and coal-fired power plants, refineries and gas treatment plants across Pakistan, with more than 2,000 MW of plant installed.

VISION

To be a leading engineering solution provider company in the region.

MISSION

Win by providing pro-active, value-added services to our customers.

Core Values

Integrity

We say what we will do, and do what we say — with clients, partners and our own people.

Quality

Work checked as it goes and documented properly, so it performs long after handover.

Reliability

Crews, materials and machinery where they are needed, when they are needed — project after project.

THE GROUP

Six Companies, One Group

Each company leads its own discipline. Together they let the group take on work that would otherwise need several separate contractors — with the handovers between them kept in-house.

Future Engineering (Pvt) Limited

Engineering, HVAC, project management and services for energy and industrial assets

Design · Construction · Project Management

FEPL Engineering Works (Pvt) Limited

Workshop, fabrication and the group's inspection & testing division

Manufacturing · Fabrication · Maintenance

Future Logistics

Carriage contractor and storage facility — freight, warehousing and delivery

Freight · Warehousing · Last-Mile

Future Law Associates

Commercial, corporate, tax and regulatory advisory

Contracts · Tax · Compliance · Advisory

Future Construction

Residential and commercial construction

Residential · Commercial · Civil Works

Future Villas

Construction design, interior & exterior design and 3D modelling — by Future Engineering (Pvt) Ltd

Design · Interiors · 3D Modelling

01

GROUP COMPANY

Future Engineering (Pvt) Limited

Engineering, HVAC, project management and services for energy and industrial assets

Future Engineering (Pvt) Limited is the engineering arm of the group and the company most of our clients deal with first. It takes a requirement from the earliest sketch through detailed design, procurement, construction and commissioning, and hands back a working asset.

Design & Engineering

Concept studies, detailed design, drawings and specifications across mechanical, electrical, civil and control disciplines.

EPC Delivery

Full engineering, procurement and construction packages under a single contract, with one team accountable for the programme.

Electro-Mechanical Installation

Erection of rotating equipment, piping, cabling, switchgear and instrumentation, through to loop checks and energisation.

Civil & Structural Works

Foundations, structures, buildings and site works built to project specification and industrial safety standards.

Commissioning & Handover

Pre-commissioning checks, functional testing, performance runs and a documented handover the operating team can actually use.

Operations & Maintenance Support

Planned maintenance, outage support and technical assistance that keeps the asset performing after handover.

02

GROUP COMPANY

FEPL Engineering Works (Pvt) Limited

Workshop, fabrication and the group's inspection & testing division

FEPL ENGINEERING WORKS PVT. LTD.

FEPL Engineering Works (Pvt) Limited is the group's manufacturing and fabrication business. It makes the parts, structures and assemblies that projects depend on, and repairs the ones that have reached the end of their service life.

Structural Fabrication

Platforms, supports, frames, ducting and steelwork fabricated to drawing and delivered ready to erect.

Pressure Parts & Piping

Spool fabrication, pipe supports and pressure components made up and prepared for installation.

Machining & Components

Turned and milled components, shafts, bushes and replacement parts produced to specification.

Plant Maintenance & Repair

Overhaul, refurbishment and repair of equipment, including work carried out during scheduled outages.

Custom Engineered Assemblies

Purpose-built assemblies designed and made for a specific plant, process or constraint.

Surface Treatment & Finishing

Preparation, coating and protective finishing so fabricated items reach site in a condition that lasts.

03

GROUP COMPANY

Future Logistics

Carriage contractor and storage facility — freight, warehousing and delivery

Future Logistics moves the group's cargo and, increasingly, everyone else's. It covers freight forwarding, warehousing and last-mile delivery, using automation and real-time tracking to keep supply chains predictable rather than merely busy.

Industrial projects live and die on when material arrives. A transformer landing a week late can idle an entire crew. The company is set up around that reality, with project cargo handled as a planning problem first and a transport problem second.

Freight Forwarding

Inbound and outbound freight by road, sea and air, coordinated door to door with a single point of contact.

Project & Heavy Cargo

Route surveys, permits and handling for oversized and over-weight consignments bound for site.

Warehousing & Storage

Covered and open storage with stock controlled, counted and reported rather than simply stacked.

Last-Mile Distribution

Scheduled and on-demand delivery to site, depot or end customer, tracked the whole way.

Customs & Documentation

Clearance, paperwork and compliance handled so consignments are not held up at the border.

Tracking & Control

Real-time visibility of where cargo is, with exceptions flagged before they become delays.

SECTORS SERVED

- Project Cargo
- Industrial Supply
- Construction Materials
- Plant & Equipment
- Retail Distribution
- General Freight

04

GROUP COMPANY

Future Law Associates

Commercial, corporate, tax and regulatory advisory

FUTURE LAW ASSOCIATES

Future Law Associates provides legal and corporate advisory support to the group and to external clients. The focus is commercial and industrial work — the contracts, approvals and disputes that sit behind projects rather than around them.

Tax Practice

Income tax, federal & provincial sales tax, withholding, audits & notices, appeals and cross-border matters for contractors and foreign EPC companies.

Contract Drafting & Negotiation

Construction, supply and service contracts drafted and negotiated so obligations and payment terms are unambiguous.

Corporate & Commercial Advisory

Company formation, shareholding, joint ventures and day-to-day commercial questions.

Regulatory & Compliance

Licensing, statutory approvals and compliance with the regulations that apply to industrial operations.

Dispute Resolution & Arbitration

Claims, negotiation, arbitration and litigation, with settlement pursued wherever it is the better outcome.

Employment & Labour

Contracts of employment, workforce policies and the labour law questions that arise on large sites.

Property & Land Matters

Title, acquisition, leases and the land-related work that precedes development.

SECTORS SERVED

Construction Contracts · Energy & Utilities · Corporate · Taxation · Employment · Real Estate · Regulatory · Foreign Contractors

05

GROUP COMPANY

Future Construction

Residential and commercial construction

Future Construction is the group's building business, delivering residential and commercial construction for private clients, developers and businesses.

It draws on the civil contracting experience that runs through the group — foundations, structures and site works built to project specification — and applies the same discipline to homes and commercial buildings.

Residential Construction

Houses and villas built from foundations to finishes, to the approved design.

Commercial Buildings

Shops, offices and commercial blocks, with structure, services and finishing coordinated.

Civil & Structural Works

Foundations, frames, masonry and site works built to specification.

Finishing & Fit-Out

Plaster, flooring, joinery and fit-out delivered to the agreed specification.

Renovation & Extensions

Additions and upgrades to existing buildings, planned around occupation.

Project Management

Programme, procurement and site supervision under one point of responsibility.

Future Villas — "Building Up Your Dreams"

06

GROUP COMPANY

Future Villas

Construction design, interior & exterior design and 3D modelling — by Future Engineering (Pvt) Ltd

FUTURE VILLAS
By Future Engineering PVT LTD

Future Villas, by Future Engineering (Pvt) Ltd, designs and builds homes — "Building Up Your Dreams". The first Future Villas development at Azizabad, Sadiqabad was launched in 2020.

Construction Design
Layouts and construction drawings prepared for approval and for the build.

Interior Design
Room layouts, finishes, lighting and joinery designed as one scheme.

Exterior Design
Elevations, facades, boundary and landscaping designed to suit the plot.

3D Modelling
Photo-real 3D models so the home can be seen and agreed before it is built.

Villa Construction
Built by Future Engineering (Pvt) Ltd from foundations to finishes.

Turnkey Handover
Design, construction and finishing delivered as one package.

02

Capabilities

Ten areas of operation across the whole life of an asset

WHAT WE DO

Areas of Operation

Electro-Mechanical Contracting

Complete electrical and mechanical installation for power plants, industrial units and utilities — from cabling and switchgear to rotating equipment and piping.

Oil & Gas

Engineering and site services for upstream, midstream and downstream facilities, including tankage, pipelines and process equipment.

Outages / Turnaround

Planned and emergency outage execution with mobilised crews, tooling and supervision to bring plants back online on schedule.

Civil Construction

Foundations, structures, buildings and site works delivered to project specification and industrial safety standards.

Inspection & Testing

Pre-commissioning checks, non-destructive testing and quality inspection that verify equipment is safe and fit for service.

EPC

Single-window engineering, procurement and construction — one accountable partner from design through to handover.

Rehabilitation & Upgradation

Restoring and modernising ageing plant and equipment to recover output, extend life and improve efficiency.

Technical Trainings

Practical, competency-based training programmes for operations, maintenance and safety teams.

Consultancy

Technical studies, feasibility work, design review and project advisory across energy and infrastructure.

Infrastructure Development

Development of roads, utilities and supporting infrastructure for industrial and community projects.

SAFETY & QUALITY

Every Job Done Safely, and Done Right

Industrial sites are unforgiving places to cut corners. The way we work is built around two things: everyone going home safely, and work that never has to be done twice.

Planned Before It Starts

Method statements and risk assessments are prepared for the task in hand, reviewed with the crew and kept at the workface — not filed away in an office.

Permit-Controlled Work

Isolations, hot work, confined spaces and work at height are controlled through a permit system and signed off before anyone starts.

Toolbox Talks Every Shift

Each shift starts with a short briefing on the day's work and its hazards, so everyone on the job knows the plan and the risks.

Inspection & Test Plans

Hold and witness points are agreed up front, so quality is checked as the work proceeds rather than discovered at handover.

Competent, Trained Crews

Supervisors and technicians are trained for the work they do, backed by the group's own in-house technical training facility.

Records You Can Use

Test sheets, inspection reports and as-built information are compiled as the work goes, and handed over in a usable form.

03

Track Record

Working with the region's leading EPC contractors since 2010
